ISI Snapshot Software Gains G-Cloud Status in UK

Minneapolis, MN (PRWEB) –Infrastructure Solutions, Inc. and its European operation, ISI Software Europe Limited, providers of IT infrastructure assessment and optimization software products and services, announce that their partner, Carbon3IT Ltd has added ISI Snapshot to their official G-Cloud product listing for supply in the United Kingdom (UK).

Cloud computing is changing the economics and sustainability of Information and Communication Technology (ICT). As a result, the UK government is committed to the adoption of cloud computing and delivering cloud-compatible resources in the government and public sectors. In 2013, the UK government set a goal of putting half of all new IT spending through small IT suppliers. Historically, small suppliers have been blocked from gaining IT spend market share, in the public sector, due to security and accreditation concerns.

Having the G-Cloud presence helps lessen the barriers in traditional government procurement frameworks. This allows the public sector to buy the IT services they need rather than being forced to design complex solutions from scratch. It also opens up a wider range of pre-qualified suppliers to choose from.
 "We are looking forward to deploying our specialist software and knowledge of industry best practice to meet the needs and objectives of dynamic UK Public Sector organizations, " said Martin Sayer, CEO, ISI Software Europe. "Our newly acquired G-Cloud presence, through our partners Carbon3IT Ltd, demonstrates our commitment to reducing costs and risks and improving operational flexibility in the UK Public Sector. It lets the public sector know we have already worked through the issues that routinely plague smaller providers such as security, cost of entry, and lack of a reliable infrastructure."

Working with Carbon3IT Ltd to provide ISI Snapshot through G-Cloud is part of ISI's long-term commitment to cloud technology. It enables the company to compete on a level playing field with larger suppliers.
ISI Snapshot has been used to help public and private clients—across a wide range of industries—with IT security and performance optimization. To learn more about ISI's Snapshot software or to request a demo, visit www.isiisi.com.
